Subject: Matt's Memo for Transmittal
Attachments: Letter to Regulatory Agencies 04-11-2018 Re-Database.pdf

Hi Fenix,

We've received Matt's final memo. Just so you're aware I asked him to leave out a couple of Gary's comments to keep the letter focused. While worth discussing at another time, I think they go beyond the scope of this specific request for the available data in a useable form. Specifically the two comments were regarding the history of the 2014 release and a possible FTP site. He did include all of Gary's other comments. As the memo is addressed to yourself and Bob Pallarino, I think it makes the most sense for you to transmit it. If you're busy or would prefer not to, I can send it off as well.

It looks like we're targeting April 17th for this discussion at 10am HST. I will follow up with Matt to see if he is available.

Give me a call if you'd like to discuss this in any detail. I believe Steve called you yesterday to discuss sending this as an attachment to an email. I've drafted an email below for you to make it easier to send off- though feel free to change or re-write, please keep us copied.

Thanks!

-Lyndsey

Mark,

Thank you for the data that was provided at the March 16th Groundwater Modeling Working Group Meeting. We are looking forward to the opportunity to further discuss the data management strategy used by the Navy in sections 6 & 7 and clarify our data requests. Attached are comments collected by our contractors which specifically address types and format of data that are critical for the Regulatory Agencies to be able to understand the basis for the Navy's CSM and models.

Please feel free to reach out if there are additional follow up questions before our meeting on April 17th.

Thank you
